Outdoor Sauna CS25T Eco 250 cm with Harvia Cilindro 9 kW Heater

~~€5,553.90~~ **€6,534.00**

Outdoor Sauna CS25T Eco – 250 cm with Terrace, Panoramic Glass Front and Harvia Cilindro PC90, 9 kW Heater

The CS25T Eco is a 250 cm outdoor sauna made from Scandinavian spruce, with room for about 4–6 people. A front terrace gives you a sheltered spot to cool down and relax between sauna sessions.

The front wall is full panoramic glass with a glass door, filling the cabin with natural light and opening the view to your garden. The rear wall is solid wood, so you keep your privacy and enjoy a warm, traditional sauna feel inside.

The Harvia Cilindro PC90, 9 kW electric heater holds a large mass of stones for fast heating and soft, even steam. LED lighting creates a cosy atmosphere in the evenings.

Scandinavian spruce is a classic sauna wood: light in colour, pleasant to the touch and naturally fragrant. The CS25T Eco is an affordable way to create a home spa in your backyard and enjoy wellness and relaxation with family or friends, all year round.

Requirements for Your Outdoor Sauna

Your sauna needs only a level, stable surface that can carry about 900 kg, and good access. The driveway to your backyard must allow easy delivery and installation.

Electrical Installation

The heater requires a three-phase (400 V) power supply with a 32 A outlet near the sauna. UAB SPA EUROPE does not carry out electrical installation work from your house to the sauna, but this is an easy task for a qualified local electrician.

Delivery Costs and Time

The production lead time after advance payment is approximately 3 weeks. We deliver the CS25T Eco across Europe. Delivery is not included in the price and is calculated individually based on your location. For a delivery quote, please contact us at info@spaeurope.eu.

FAQ

- How many people fit in the CS25T Eco? About 4–6 people.
- What wood is the CS25T Eco made of? Scandinavian spruce, with a solid wood rear wall and a full panoramic glass front.
- Does the sauna need a foundation? No, a level and stable surface that can carry about 900 kg is enough.
- What power supply does the heater need? A three-phase 400 V connection, installed by a qualified electrician.
- How long does production take? Approximately 3 weeks after advance payment.
